

C-MAP Chart Catalog

Ordering Tool for Charts and
Weather Services

An easy to use ordering tool for C-MAP Electronic Charts and Weather Services

The C-MAP Chart Catalog allows you to view, navigate, select and order C-MAP electronic charts, or various weather options, in an interactive way. Orders can be electronically tailored to your specific needs using advanced tools, such as bounding box selection, freehand selection, route selection, and more. After selection of required items is completed, simply press the "E-mail order" button, and enter the address of your local C-MAP distributor. The order (.clo file) will be automatically attached.

- :: Ordering C-MAP ENC
- :: Ordering C-MAP Professional
- :: Ordering C-MAP Professional+
- :: Ordering C-MAP Fishery Database
- :: Ordering Weather subscriptions
- :: Standard prices are automatically calculated to your order
- :: Supports import of routes from major ECS and ECDIS manufacturers, as well as from C-MAP OceanView
- :: Automatic selection of chart cells along a route, or an area to generate ordering portfolio
- :: On-line, or Off-line functionalities according to end-user requirements
- :: Free of charge Catalog - from our web-page or from CD

C-MAP Chart Catalog

On screen ordering

Import & View

Orders already made, or originating from other sources may also be imported and displayed.

The chart view offers zooming, panning and setting of a home location in order to easily revert to your regional/home location.

If you have access to a route created in your ECS/ECDIS or C-MAP's OceanView, you may import the route and automatically generate a suggestion for which ENCs/Professional charts you will need for the intended voyage. This way you can minimize the required portfolio and save costs.

Weather Subscription Order

A further advantage is the possible to order Weather subscriptions (for chart overlay), with resolutions ranging from 300 km down to 10 km. Coverage may range from 3°x3° (small movable area) through 20°x20° (medium movable area), and 80°x80° (large movable area), up to global coverage according to individual needs and requirements. Most of these subscriptions are also priced, enabling the user to see the full cost of the service before ordering.

On-line as well as Off-line Catalog version

The catalog was originally developed as an on-line tool, requiring an internet connection to be able to download catalog contents. We have now modified this practical tool into a dual option application that can be used both off-line and on-line.

The Chart Catalog CD now also contains database files that can be loaded off-line if no internet connection is available. Hence, the catalog may be used by end users, i.e. onboard any vessel, whether or not they have access to the internet.

All electronic charts are released as CDs or DVDs using the CM-93/3 data format. It is important that your navigation system supports this data format.
